Experience

Defakto Group – Dallas, TX

December 2016 – Present

Front End Developer and Web Producer

- Led development teams on multiple projects with clients varying from small offices to enterprise businesses
- Built out local team development environments for multiple projects utilizing tools such as SASS, Gulp, NPM, etc.
- Worked closely with designers, UX architects, QA teams, distributed workers, and business team members
- Led meetings with Enterprise-level clients to ensure highly-technical information is conveyed in an understandable way
- Research and implement solutions to maintain a rapid development environment; working smarter
- Interviewed and assessed potential team hires to create a flexible and capable team
- Created WordPress themes and modified existing ones to fit client needs
- Developed 503 compliant sites to ensure accessibility for a wide range of users

AT&T w/ Axelon Services Corporation – Remote

April 2016 – December 2016

Front End Developer and Web Producer

- Developed and implemented content and features through multiple platforms to meet business needs
- Coordinated with designers and producers to create high quality marquees and tiles for product launches
- Managed landing page updates, working with product owners and designers on a daily
- Supported the validation team through testing and troubleshooting of problems within the system
- Created and developed landing pages and content for the consumer website and store based on requirements
- Participated in the migration of content from Adobe CQ to Adobe AEM

Time Warner Cable Business Class w/ Defakto Group – Remote

October 2014 – April 2016

Front End Developer and Web Producer

- Developed and implemented content and features through Adobe CQ on a daily basis
- Responded to requirements through available components when possible, else coding HTML, CSS, and Javascript solutions
- Played a key role in organizing and carrying out the rollout of a major upgrade from Adobe CQ5 to 6.1 across multiple instances
- Participated in the migration from a previous content management system to Adobe CQ
- Trained incoming developers and producers in processes and practices to maintain a consistent vision and brand image
- Assisted junior producers in troubleshooting roadblocks and understanding the nuances of the system and processes
- Developed documentation of practices and pain points for the internal knowledge base
- Iteratively tested and responded to feedback for new features and pages with an offshore QA team
- Provided design feedback and technical feasibility for website updates and additions to product owners and teams
- Worked remotely on a tight schedule in an agile environment, maintaining direct contact with stakeholders
- Tested website responsiveness and functionality across multiple devices, operating systems, and resolutions
- Coordinated tickets through Podio, JIRA, and Basecamp to track issues and communicate between stakeholders
- Worked as a team to divide and conquer major issues, changes, and implementations to ensure successful launches
